MONTHLY REPORT

25X1

PAR 212

10 July 1964

SUBJECT: Color Acquisition System Review Study

TASK/PROBLEM

1. Investigate color photography as a possible intelligence medium. Investigation should cover the capability of present and possible future acquisition systems in an attempt to predict future requirements to support exploitation and data reduction of the collected color photographic intelligence material.

DISCUSSION

2. During review of PAR progress 8-11 June 64 customer representatives indicated expansion of current effort was desirable. Effort to be directed to cover the more explicit requirements and capabilities of collection systems, associated P.I. equipment and exploitation methods. It was stressed to the Customer that high altitude color acquisition materials were required to answer current questions and for predicting results. Until this material was obtained, we would not have a complete story.

PLANNED ACTIVITIES

3. More data on acquisition material capabilities and required characteristics will be forthcoming as soon as the needed high altitude acquisition has been obtained on Kodak Ektachrome High Definition Film, Type SO-121.

4. Effort will continue in the survey of acquisition systems and compatible films and in the development of a recommended usability diagram.
